

## Playing with the sink

I like to play with the water in the sink, I think it's very fun.  
But sometimes the water goes outside of the sink and all over the ground.

This is dangerous as someone could slip and fall.

Or this can cause the floor to be damaged which can cost  
\_\_\_\_\_ a lot of money to fix.

I should try to keep the water inside the sink or play with my water beads  
instead when I want to play with water.

When I see the water starting to go over the sides of the sink then I need  
to turn the tap off and let the water drain down the sink.

I will watch where the water is going and try not to flood the sink!
